GENERAC®

PROTECT YOUR INVESTMENT

Protect Your Investment

Get the most out of your new Generac® residential standby generator when you add the GenPad™ from DiversiTech.

Protect Your Generator

The GenPad provides a sturdy, permanent base for your Generac® generator that won't shift, crack or degrade over time. Each GenPad is made from a composite of high strength fibers and cement and is warranted for the life of the generator. Enjoy the comfort of knowing your generator is protected and stable on the new GenPad. GenPads are available for most major brands of air-cooled generators and were specifically designed to meet the engineering specifications of each manufacturer. Your generator will mount securely to the GenPad using bolts and the steel inserts built into the pad. This helps keep your generator centered on the pad and prevents damage from shifting or moving.

Improved Appearance

Each GenPad gives a finished look to your generator installation and is contoured to match the exact dimensions of your unit. This makes for an attractive installation that will last for the life of your generator.

Installs Faster

The GenPad also installs faster and cleaner than a poured concrete pad so you don't have to worry about messy concrete or waiting for it to dry and cure before installing your generator. GenPads are available in two models to meet the needs of any area.

Standard GenPads are ideal for most residential applications. GenPad Hurricane pads are an even thicker, heavier pad designed for storm prone areas including south Florida and the Gulf Coast.

- Extremely Impact and Breakage Resistant
- Fiber reinforced concrete with rebar for extra support
- Flat bottom to facilitate easy leveling of the pad and generator
- Virtually eliminates sinking of the unit into the ground
- No maintenance
- Warranted for the life of the generator
